THE SERIOUS BEGINNER'S TRADING & INVESTING GIFT PACK

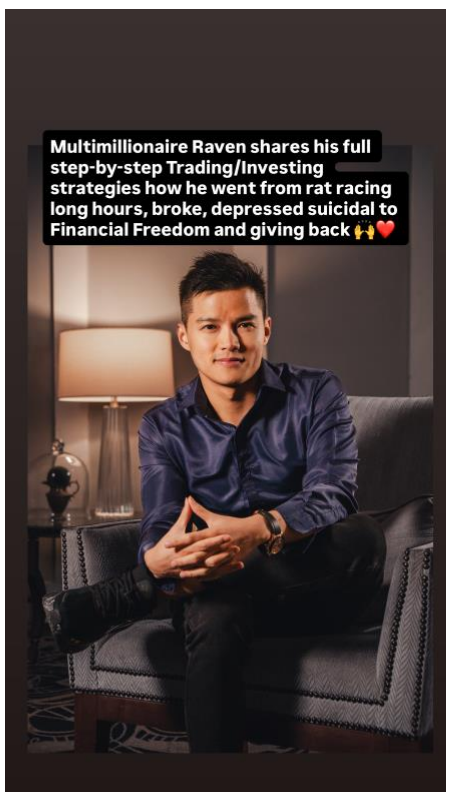
A practical step-by-step starter kit to help you think more clearly, avoid rookie mistakes, and prepare before start trading/investing in the stock markets.

Created by Raven Ben Hung

UK Multimillionaire Trader & Investor

Important Educational Notice

This gift pack is for education only. You always have 1to1 mentor when it comes to learning any skillsets, especially finances.



My Personal Story - Why I Created This For You

Before I became known as the UK one of the youngest most successful trader and investor, I was just someone trying to find a better way. Since small, I wanted to help my family as I was tired of seeing them arguing and suffered because of the lack of finances. My parents asked me to study hard and get a good job like Doctor, Lawyer, Business Owner, Engineer, dentist, all these top 10% earner job. I did. I studied at Imperial College London, thinking my life was gonna be easy after graduating from the top 1 university in London.

But it couldn't be further away from the truth, I found myself working super long hours, sacrificing my health, my time, worried about retirement, I was unfulfilled. Moreover, I didn't even have time to see one of my dearest family members who helped raising me up when I was a kid, before she passed away from breast cancer.

I hit rock bottom. I have never felt that level of pain in my entire life. There as so much regret and remorse I become suicidal at one point.

I said: do I see myself doing the same thing and and no change like that for another 15 years? No way.

So, I got into trading/investing by myself, got into these free telegram forex gold groups, free signals, free crypto platform etc. I lost a lot of money so fast, having no mentor.

I decided to become an outstanding trader and investor. I read over 500 books on trading/investing. I attended over 80 investment courses now all over the world, at that time I didn't have money, so I was borrowing money on my credit cards and loans to go on a lot of these courses.

I then persuaded some of the greatest living traders investors all around the world to mentor me 1to1. They taught me their exact strategies, we sat on our laptops.

A few years later I came back to the UK, applied everything that I've learnt, I become a multimillionaire.

When I first discovered trading and investing, I did not magically know everything. I made mistakes, learned from 1to1 mentors, studied how markets really move, and slowly built a more structured way of thinking. The biggest lesson for me was simple: you do not need to gamble, rush, or copy strangers online. You need 1to1 education, discipline, risk management, and a clear framework.

That is why I created this gift pack. Not to promise you quick money. Not to make trading look easy. But to help you to give you an incredible edge in the markets and start building the kind of mindset serious traders and investors need.

If you are here because you want more from life, I understand you. I have been there. My hope is that this gift gives you clarity, confidence, and a better starting point before you watch the full masterclass.

Welcome

Congratulations on getting this value pack gift worth £2,000! I created this gift pack to give you a clear, practical starting point before you start making a serious income from trading/investing.

What you will get inside

- The 7 biggest beginner mistakes in trading and investing, so you can avoid it.
- The Extreme Fear buying step-by-step checklist
- A simple stock research framework
- A risk management checklist before entering any trade
- A private watchlist template you can print or copy into Google Sheets
- A short action plan to help you get value from the free masterclass
-

How to use this pack

Read it once quickly. Then go through it again with a pen and paper. The goal is not to memorise everything. The goal is to start asking better questions, you can also watch the full 3 hour masterclass where I break it down here www.ravenhung.com/home.

Part 1 - The 7 Biggest Beginner Trader/investor Mistakes

1. Buying without a clear reason

If you cannot explain why you are buying in one simple sentence, you are probably not doing it right.

2. Starting trading/investing without a 1to1 mentor

Beginners often try to get rich quick with free stuffs online. Just think, can our 5 year old learn how to swim without 1 to1 coach to hand hold her?

3. Buy a stock/crypto just because your friends and uber driver asks you to buy.

A tip is not a strategy. To get good at trading, you need 4 things, WHEN to buy, WHEN to sell, WHAT to buy, and HOW to buy.

4. Ignoring earnings guidance and outlook

The market often moves based on what a company says about the future, not just what happened in the past.

5. Selling too fast because of fear

Many people sell the first small profit because they are scared, then watch the stock continue higher without them. A powerful trader/investor will rotate into another undervalue sector/industires.

6. Buying stocks with super low growth <10% and high >PE.

The secrets to winning this game is to do the opposite.

7. Thinking education is optional

You can pay for education before the mistake, or you can pay the market after the mistake. The second one is usually more painful.

Part 2 - The Extreme Fear Buying Checklist

Fear can create opportunity, but only when you are prepared. The goal is not to blindly buy because the market is falling. The goal is to identify strong businesses or assets that may have been punished too aggressively.

Before buying during fear, check these points

- Market fear is extremely high. People are super worried and fearful.
- Historically seasonality and pattern says buy.
- Big whales like institutions or Raven is buying too.
- Put/call ratio, VIX is at the highest historically.
- Market is still undervalued.
- The company has strong or improving revenue growth.
- Earnings guidance or outlook is raised, or better than the market expected.
- The company has enough cash, demand, or competitive advantage to survive difficult periods.
- Valuation looks reasonable compared with its future growth potential.
- You understand why the price dropped.
- You have decided your position size before entering.
- You know what would make you exit.
- You are calm enough to follow your plan.

Raven's Rule

Extreme fear is only useful when you have preparation, patience, and disciplined. Without those, fear can destroy confidence and capital.

Part 3 - My Simple Stock Research Framework

This framework is not complicated. It helps you avoid buying purely because a stock is popular, cheap, or moving fast.

Question	What to look for	Your notes
What does the company do?	Can you explain it simply to a 10 year old?	
Why could it grow? What's the rate?	Revenue growth, industry tailwinds, new products, demand	
What did management say?	Guidance, outlook, confidence, risks	
Is growth accelerating or slowing?	Compare recent quarters and future guidance	
Is valuation reasonable?	Compare P/E or other multiples with growth rate and peers	
What could go wrong?	Debt, competition, regulation, weak demand, margin pressure	
What is your plan?	Entry reason, position size, exit reason	
Can this stock 100 X the market index?	What is their recent earning guidance saying compared to last year? What's the growth rate?	

Simple test

Just because the price is going up and looks exciting but the numbers, guidance, or risk do not support it, go to the next stock!

Part 4 - Risk Management Rules Before Any Trade

Your first job is not to make money. Your first job is to avoid a mistake that damages your confidence, your capital, or your ability to continue learning.

- Always use a TAX free Stock & Shares account first like trading212. Or from your local banks.
- You can use leverage platforms ONLY during extreme fear situation to make big money.
- The biggest risk is actually not taking a risk. Once you've sold a positions at a huge profits, use that profits to emjoy your life and reinvest into another undervalue straight away.
- Because cash is trash. Inflation is huge.
- Know your maximum loss before you enter.
- Do not use aggressive leverage unless you fully understand expiry date, margin, spread, rollover, and forced closure risk.
- You can always dollar cost averaging into a position.
- Write down your reason for entering before you click buy or sell.
- Write down your reason for exiting before emotion appears.
- If you cannot sleep because of the position, it is probably too big.
- Never confuse confidence with certainty. Markets can always surprise you.
- Always hire a 1to1 mentor to correct your blindspots, can be anyone, doesn't have to be me.

Important

Leverage can magnify both profit and loss. It can also force you out at the worst possible time especially if things are in the middle (not extreme fear). Beginners should only use leverage with a 1to1 mentor..

Part 5 - Private Watchlist Template

Use this page to start building a serious watchlist. Do not use it as a signal to buy. Use it as a thinking tool.

Stock / Asset	Why I am watching it	Growth / Guidance	Valuation	Risk	Action Plan

Suggested scoring: 1 = weak, 3 = acceptable, 5 = strong. A high score does not mean “buy”. It simply means the idea deserves more study

Part 6 - Your Masterclass Action Plan

I have actually also recorded a 3 hour Masterclass to help you to make an income from home, do not watch it like entertainment. Watch it like a powerful training, as you will get a lot of value from the masterclass.

➔ if you haven't already, watch the 3 hour free masterclass now, and feel free to book a call inside.

(watching this link is the most important part of this Checklist GIFT pack)

www.ravenhung.com/home. (copy and paste into browser to watch it now)

After you watch

- Submit your homework and notes to Raven on whatapps 07519501616.
- Reply to the WhatsApp message with your notes if requested.
- Feel free to book a call when you're ready.

With love,
Ben Multimillionaire Trader & Investor
